bema[®]

— A clean product line.

PREVENT ACCIDENT RISKS AND CROP FAILURES.

SAFETY FIRST!

We do not offer any ready-made products, but machines that are individually designed and manufactured in Germany - tailored to your wishes and requirements. Functionality is always in the foreground.

The most persistent dirt such as solidified mud, corn, dirt or rubber marks may be a risk on public roads, construction sites, in gravel pits or biogas plants.

With the **bema Scraper unit**, coarse and persistent dirt can be scraped off the roads easily to prevent road closures or even accidents. Even more thorough cleaning is achieved in combination with the **bema High pressure water unit** (installation on bema 75 Dual and bema 35 Dual).

Prevent accidents, road closures and crop failures. Take up the fight against stubborn dirt with mounting solutions from bema.

bema Specialists

bema Scraper unit

Installation on:
bema 75 Dual, bema 35 Dual, bema 30 Dual

Extremely stable and very good ground adjustment:

The scraper unit is divided into several Hardox segments guided by spring tines

Better cleaning performance: Optimal canalisation of the dirt by dirt deflector sheets

Good overview is maintained: The scraper unit is mounted instead of the collection container and controlled via the cylinders of the collection container.

Compact design

CHOOSE THE BEST COMBINATION !

bema High pressure water unit

Installation on:
bema 75 Dual, bema 35 Dual

Powerful and thorough cleaning:

High pressure unit with storage tank (2,000 ltrs.) and pump (operating pressure 120 bar/50 bar)

Extremely powerful: Mechanical drive via drive shaft

Individually adjustable: The drain pipe of the sweeping machine is equipped with up to 11 high-pressure nozzles, depending on the machine width

Mobil use: Upon request, the system can also be used as a mobile high-pressure cleaner. (incl. 22 m hose, hose reel, plus high pressure lance)

Option 1:

High pressure up to 120 bar as a compact unit with water tank at the rear

Option 2:

High pressure up to 50 bar as a compact unit with water tank at the rear

Option 3:

High pressure up to 50 bar with pump placed on the machine, suction line and spray boom
